AM HEAT EXCHANGER: A SOLUTION FOR THE FUTURE AIRCRAFT

April 17th - 5PM CET (11AM EST)

AM Heat Exchanger: A Solution for the Future Aircraft

You're invited to our upcoming webinar hosted by AddUp, Printsky, and Sogclair!

Join Alexian Juin, Nicolas Correge, and Alexandre Boulzaguet on

Wednesday, April 17th, at 5pm CET / 11 am EST.

About this Webinar

In the world of aerospace engineering, thermal management for fluidic applications is crucial. Additive manufacturing offers important technological advances in the development and performance of heat exchangers which will greatly benefit the next generation aircraft.

In this webinar, we explain how additive supports a more efficient and complex design for heat exchangers offering a safer and more sustainable future for aircrafts.

AddUp will be joined by experts from Sogclair and PrintSky to fully showcase the importance of AM technology in the aerospace industry and specifically in heat exchanger development.
